# mHealth Framework for Health Systems Strengthening

## TECHNICAL CONCEPT

### mHealth innovations as health system strengthening tools: 12 common applications and a visual framework

Alain B Labrique,<sup>a</sup> Lavanya Vasudevan,<sup>a</sup> Erica Kochi,<sup>b</sup> Robert Fabricant,<sup>c</sup> Garrett Mehl<sup>d</sup>

This new framework lays out 12 common mHealth applications used as health systems strengthening innovations across the reproductive health continuum.

The rapid proliferation of mHealth projects—albeit mainly pilot efforts—has generated considerable enthusiasm among governments, donors, and implementers of health programs.<sup>1</sup> In many instances, these pilot projects have demonstrated conceptually how mHealth can alleviate specific health system constraints that hinder effective coverage of health interventions.

Large-scale implementation or integration of these mHealth innovations into health programs has been limited, however, by a shortage of empirical evidence supporting their value in terms of cost, performance, and health outcomes.<sup>1–4</sup> Governments in low- and middle-income countries face numerous challenges and competing priorities, impeding their ability to adopt innovations.<sup>5</sup> Thus, they need robust, credible evidence about mHealth projects in order to consider mHealth alongside essential health interventions, and guidance about which mHealth solutions they should consider to achieve broader health system goals.<sup>2</sup> Their tolerance for system instability or failure can be low, even when the status quo may be equally, or more, unreliable.

Current larger-scale effectiveness and implementation research initiatives are working to address the evidence gaps and to demonstrate the impact of mHealth investments on health system targets.<sup>1</sup> Other efforts are underway to synthesize such findings.<sup>5</sup>

#### MHEALTH AS A HEALTH SYSTEMS STRENGTHENING TOOL

Recent mHealth reviews have proposed that innovators focus on the public health principles underlying

<sup>a</sup> Johns Hopkins Bloomberg School of Public Health, Baltimore, MD, USA  
<sup>b</sup> United Nations Children's Fund (UNICEF), New York City, NY, USA  
<sup>c</sup> Frog Design, New York City, NY, USA  
<sup>d</sup> World Health Organization, Geneva, Switzerland  
Correspondence to Garrett Mehl (mehlg@who.int).

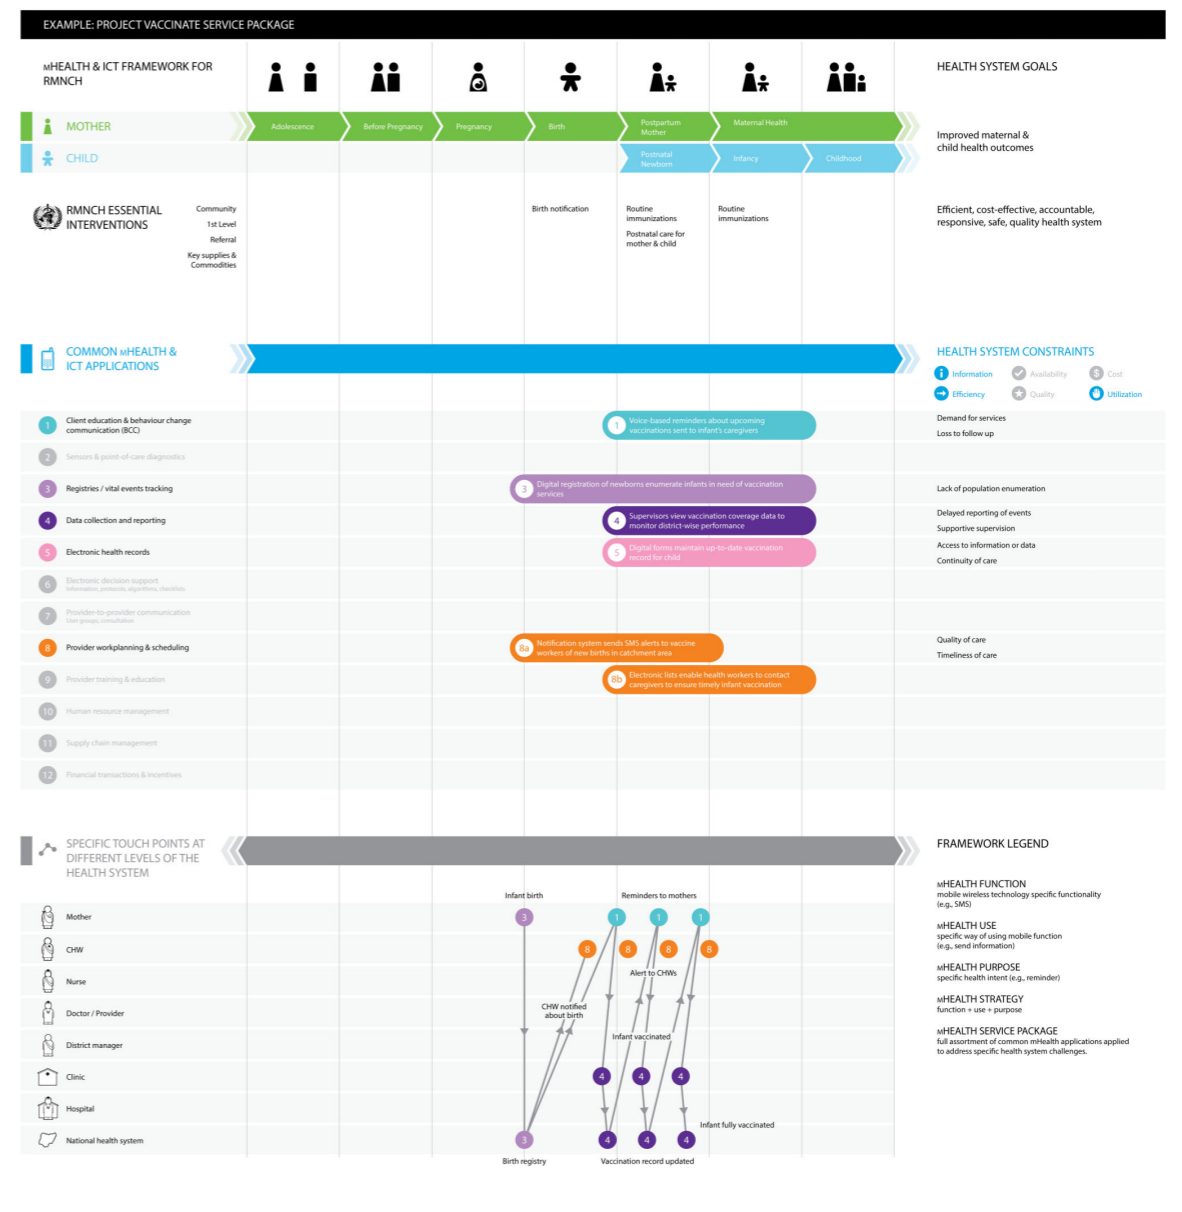

mHealth initiatives, rather than on specific mHealth technologies.<sup>6</sup> International agencies and research organizations have also endeavored to frame mHealth interventions within the broader context of health system goals or health outcomes.<sup>2</sup> The term “health system” includes all activities in which the primary purpose is to promote, restore, or maintain health.<sup>7</sup> Some elements of a framework for evaluating health systems performance by relating the goals of the health system to its essential functions have been proposed previously, which we believe can serve as a model for articulating and justifying mHealth initiatives and investments.<sup>7</sup>

Applying a health systems lens to the evaluation of mHealth initiatives requires different indicators and methodologies, shifting the assessment from whether the mHealth initiative “works” to process evaluation or proxy indicators of the health outcome(s) of interest. This new way of thinking would facilitate selection of mHealth tools that are appropriate for identified challenges. In other words, it would drive people to first identify the key obstacles, or constraints, to delivering proven health interventions effectively, and to then apply appropriate mHealth strategies that could overcome these health system constraints.<sup>8</sup>

Presenting mHealth as a range of tools for overcoming known health system constraints, as a health systems “catalyst,” may also improve communication between mHealth innovators and health program implementers. Communicating mHealth technologies as tools that can enhance delivery of life-saving interventions through improvements in health systems performance, such as coverage, quality, equity, or efficiency, will resonate with health decision-makers.<sup>7</sup>

Hence, rather than being perceived as siloed, stand-alone solutions, mHealth strategies should be viewed as integrable systems that should fit into existing health system functions and complement the health

### What is mHealth Evidence?

[mHealth](#) is the use of mobile information and communication technologies for improving health. It can be used for a wide range of purposes, including health promotion and illness prevention, health care delivery, training and supervision, electronic payments, and information systems. Many believe that it has the potential to shift the paradigm on when, where, how and by whom health services are provided and accessed.

But mHealth is a young field and much of the evidence on “what works” is still emerging. Even the evidence that exists can sometimes be difficult to find.

Accepted: 09 February 2016

To improve the completeness of reporting of mobile health (mHealth) interventions, the WHO mHealth Technical Evidence Review Group developed the mHealth evidence reporting and assessment (mERA) checklist. The development process for mERA consisted of convening an expert group to recommend an appropriate approach, convening a global expert review panel for checklist development, and pilot testing the checklist. The guiding principle for the development of these criteria was to identify a minimum set of information needed to define what the mHealth intervention is (content), where it is being implemented (context), and how it was implemented (technical features), to support replication of the intervention. This paper presents the resulting 16 item checklist and a detailed explanation and elaboration for each item, with illustrative reporting examples. Through widespread adoption, we expect that the use of these guidelines will standardise the quality of mHealth evidence reporting, and indirectly improve the quality of mHealth evidence.

Mobile technologies have the potential to bridge systemic gaps needed to improve access to and use of health services, particularly among underserved populations. mHealth—defined as the use of mobile and wireless technologies for health—aims to capitalise on the rapid uptake of information and communication technologies (ICT) to improve health system efficiency and health outcomes. Over the past decade, global enthusiasm and the interest of development agencies, researchers, and policy makers have led to the rapid proliferation of mHealth solutions throughout developed and developing countries. The World Bank reported that there were more than 500 mHealth projects in 2011 alone.<sup>1</sup> Despite the emergence of hundreds of mHealth studies and initiatives, there remains a lack of rigorous, high quality evidence on the efficacy and effectiveness of such interventions.<sup>2,3</sup> The current mHealth evidence is disseminated in multiple forms including peer reviewed literature, white papers, reports, presentations, and blogs. The evidence base is heterogeneous in quality, completeness, and objectivity of the reporting of mHealth interventions—thus making comparisons across intervention strategies difficult. This has led to a call for a set of standards that can harmonise and improve the quality of future research publications, to facilitate screening of emerging evidence and identification of critical evidence gaps. Such improvements in reporting of evidence can support policy makers in making decisions around mHealth intervention selection.<sup>4</sup>

The value of standardised guidelines is well accepted and several tools exist to assess the quality and to standardise the reporting of scientific evidence. For example, the grading of recommendations assessment, development, and evaluation (GRADE) approach rates the quality of evidence and the strength of recommendations, and is routinely used by international organisations such as the World Health Organization and Cochrane Collaboration.<sup>5</sup> In other fields, the consolidated health economic evaluation reporting standards (CHEERS) statement provides reporting guidance for economic evaluations.<sup>6</sup> Other tools have also been developed to standardise the reporting of systematic reviews and meta-analyses (eg, preferred reporting of systematic reviews and meta-analyses (PRISMA)),<sup>7</sup> and assess their methodological quality or reliability (eg, assessing methodological quality of systematic reviews (AMSTAR)).<sup>8</sup> The consolidated standards for reporting trials (CONSORT) statement provides a 22 item checklist for reporting of randomised controlled trials.<sup>9</sup> Other evidence reporting and synthesis approaches exist for

### SUMMARY POINTS

To improve the reporting of mobile health (mHealth) interventions, the WHO mHealth Technical Evidence Review Group developed a checklist on mHealth evidence reporting and assessment (mERA)

The checklist aims to identify a minimum set of information needed to define what the mHealth intervention is (content), where it is being implemented (context), and how it was implemented (technical features), to support replication of the intervention

Through widespread adoption, these guidelines should standardise the quality of mHealth evidence reporting, and indirectly improve the quality of mHealth evidence

<b>1.1 TARGETED CLIENT COMMUNICATION</b>	<b>1.3 CLIENT TO CLIENT COMMUNICATION</b>	<b>1.6 ON-DEMAND INFORMATION SERVICES TO CLIENT</b>
1.1.1 Transmit health event alerts to specific population group(s)	1.3.1 Peer group for clients	1.6.1 Client look-up of health information
1.1.2 Transmit targeted health information to client based on health status or demographics	<b>1.4 PERSONAL HEALTH TRACKING</b>	<b>1.7 CLIENT FINANCIAL TRANSACTIONS</b>
1.1.3 Transmit targeted alerts and reminders to client(s)	1.4.1 Access by client to own medical records	1.7.1 Transmit or manage out-of-pocket payments by client
1.1.4 Transmit diagnostics result, or availability of result, to clients	1.4.2 Self-monitoring of health or diagnostic data by client	1.7.2 Transmit or manage vouchers to client for health services
<b>1.2 UNTARGETED CLIENT COMMUNICATION</b>	<b>1.5 CITIZEN BASED REPORTING</b>	1.7.3 Transmit or manage incentives to clients for health services
1.2.1 Transmit untargeted health information to an undefined population	1.5.1 Reporting of health system feedback by clients	
1.2.2 Transmit untargeted health event alerts to undefined group	1.5.2 Reporting of public health events by client	

## 2.0 HEALTHCARE PROVIDERS

<b>2.1 CLIENT IDENTIFICATION AND REGISTRATION</b>	<b>2.5 HEALTHCARE PROVIDER COMMUNICATION</b>	<b>2.8 HEALTHCARE PROVIDER TRAINING</b>
2.1.1 Verify client unique identity	2.5.1 Communication from healthcare provider to supervisor	2.8.1 Provide training content to healthcare provider(s)
2.1.2 Enrol client for health services/clinical care plan	2.5.2 Communication and performance feedback to healthcare provider	2.8.2 Assess capacity of healthcare provider
<b>2.2 CLIENT HEALTH RECORDS</b>	2.5.3 Transmit routine news and workflow notifications to healthcare provider(s)	<b>2.9 PRESCRIPTION AND MEDICATION MANAGEMENT</b>
2.2.1 Longitudinal tracking of client's health status and services received	2.5.4 Transmit non-routine health event alerts to healthcare providers	2.9.1 Transmit or track prescription orders
2.2.2 Manage client's structured clinical records	2.5.5 Peer group for healthcare providers	2.9.2 Track client's medication consumption
2.2.3 Manage client's unstructured clinical records	<b>2.6 REFERRAL COORDINATION</b>	2.9.3 Report adverse drug effects
2.2.4 Routine health indicator data collection and management	2.6.1 Coordinate emergency response and transport	<b>2.10 LABORATORY AND DIAGNOSTICS IMAGING MANAGEMENT</b>
<b>2.3 HEALTHCARE PROVIDER DECISION SUPPORT</b>	2.6.2 Manage referrals between points of service within health sector	2.10.1 Transmit diagnostic result to healthcare provider
2.3.1 Provide prompts and alerts based according to protocol	2.6.3 Manage referrals between health and other sectors	2.10.2 Transmit and track diagnostic orders
2.3.2 Provide checklist according to protocol	<b>2.7 HEALTH WORKER ACTIVITY PLANNING AND SCHEDULING</b>	2.10.3 Capture diagnostic results from digital devices
2.3.3 Screen clients by risk or other health status	2.7.1 Schedule clients appointments based on clinical care plan	2.10.4 Track biological specimens
<b>2.4 TELEMEDICINE</b>	2.7.2 Schedule healthcare provider's activities	
2.4.1 Consultations between remote client and healthcare provider		
2.4.2 Remote monitoring of client health or diagnostic data by provider		
2.4.3 Transmission of medical data to healthcare provider		
2.4.4 Consultations for case management between healthcare providers		

## 3.0 SYSTEM MANAGERS

<b>3.1 HUMAN RESOURCE MANAGEMENT</b>	<b>3.3 PUBLIC HEALTH EVENT NOTIFICATION</b>	<b>3.6 EQUIPMENT AND ASSET MANAGEMENT</b>
3.1.1 List health workforce cadres and related identification information	3.3.1 Notification of public health events from point of diagnosis	3.6.1 Monitor status of health equipment
3.1.2 Monitor performance of healthcare provider(s)	<b>3.4 CIVIL REGISTRATION AND VITAL STATISTIC</b>	3.6.2 Track regulation and licensing of medical equipment
3.1.3 Manage certification/registration of healthcare provider(s)	3.4.1 Notify birth event	<b>3.7 FACILITY MANAGEMENT</b>
3.1.4 Record training credentials of healthcare provider(s)	3.4.2 Register birth event	3.7.1 List health facilities and related information
<b>3.2 SUPPLY CHAIN MANAGEMENT</b>	3.4.3 Certify birth event	3.7.2 Assess health facilities
3.2.1 Manage inventory and distribution of health commodities	3.4.4 Notify death event	
3.2.2 Notify stock levels of health commodities	3.4.5 Register death event	
3.2.3 Monitor cold-chain sensitive commodities	3.4.6 Certify death event	
3.2.4 Register licensed drugs and health commodities	<b>3.5 HEALTH FINANCING</b>	
3.2.5 Manage procurement of commodities	3.5.1 Register and verify client insurance membership	
3.2.6 Report counterfeit or substandard drugs by clients	3.5.2 Track insurance billing and claims submission	
	3.5.3 Track and manage insurance reimbursement	
	3.5.4 Transmit routine payroll payment to healthcare provider(s)	
	3.5.5 Transmit or manage incentives to healthcare provider(s)	
	3.5.6 Manage budget and expenditures	

## 4.0 DATA SERVICES

<b>4.1 DATA COLLECTION, MANAGEMENT, AND USE</b>	<b>4.2 DATA CODING</b>	<b>4.3 LOCATION MAPPING</b>
4.1.1 Non-routine data collection and management	4.2.1 Parse unstructured data into structured data	4.3.1 Map location of health facilities/structures
4.1.2 Data storage and aggregation	4.2.2 Merge, de-duplicate, and curate coded datasets or terminologies	4.3.2 Map location of health events
4.1.3 Data synthesis and visualization	4.2.3 Classify disease codes	4.3.3 Map location of clients and households
4.1.4 Automated analysis of data to generate new information or predictions on future events		4.3.4 Map location of healthcare provider(s)
		<b>4.4 DATA EXCHANGE AND INTEROPERABILITY</b>
		4.4.1 Data exchange across systems

- Standardized “**classifications**” used across resources for **inventory**, formulating **WHO recommendations**, and **implementation guidance**

## CLASSIFICATION OF DIGITAL HEALTH INTERVENTIONS v1.0

*A shared language to describe the uses of digital technology for health*

### WHAT IS IT?

The classification of digital health interventions (DHIs) categorizes the variety of ways in which digital and mobile technologies are being used to support health system needs. Targeted primarily at public health audiences, this Classification framework aims to promote an accessible and bridging language for health program planners to articulate functionalities of digital health implementations. Also referred to as a taxonomy, this Classification scheme is anchored on the unit of a “digital health intervention,” which represents a discrete functionality of the digital technology to achieve health sector objectives.

# 1.0 CLIENTS

<b>1.1</b>	<b>TARGETED CLIENT COMMUNICATION</b>	<b>1.3</b>	<b>CLIENT TO CLIENT COMMUNICATION</b>	<b>1.6</b>	<b>ON-DEMAND INFORMATION SERVICES TO CLIENTS</b>
1.1.1	Transmit health event alerts to specific population group(s)	1.3.1	Peer group for clients	1.6.1	Client look-up of health information
1.1.2	Transmit targeted health information to client based on health status or demographics	<b>1.4</b>	<b>PERSONAL HEALTH TRACKING</b>	<b>1.7</b>	<b>CLIENT FINANCIAL TRANSACTIONS</b>
1.1.3	Transmit targeted alerts and reminders to client(s)	1.4.1	Access by client to own medical records	1.7.1	Transmit or manage out of pocket payments by client
1.1.4	Transmit diagnostics result, or availability of result, to clients	1.4.2	Self monitoring of health or diagnostic data by client	1.7.2	Transmit or manage vouchers to client for health services
<b>1.2</b>	<b>UNTARGETED CLIENT COMMUNICATION</b>	1.4.3	Active data capture/ documentation by client	1.7.3	Transmit or manage incentives to clients for health services
1.2.1	Transmit untargeted health information to an undefined population	<b>1.5</b>	<b>CITIZEN BASED REPORTING</b>		
1.2.2	Transmit untargeted health event alerts to undefined group	1.5.1	Reporting of health system feedback by clients

2.3.2	Provide checklist according to protocol	<b>2.7</b>	<b>HEALTH WORKER ACTIVITY PLANNING AND SCHEDULING</b>	2.10.3	Capture diagnostic results from digital devices
2.3.3	Screen clients by risk or other health status	2.7.1	Identify clients in need of services	2.10.4	Track biological specimens
<b>2.4</b>	<b>TELEMEDICINE</b>	2.7.2	Schedule healthcare provider's activities		
2.4.1	Consultations between remote client and healthcare provider				
2.4.2	Remote monitoring of client health or diagnostic data by provider				
2.4.3	Transmission of medical data to healthcare provider				
2.4.4	Consultations for case management between healthcare providers				

# 3.0

## HEALTH SYSTEM MANAGERS

<b>3.1 HUMAN RESOURCE MANAGEMENT</b>	<b>3.3 PUBLIC HEALTH EVENT NOTIFICATION</b>	<b>3.6 EQUIPMENT AND ASSET MANAGEMENT</b>
3.1.1 List health workforce cadres and related identification information	3.3.1 Notification of public health events from point of diagnosis	3.6.1 Monitor status of health equipment
3.1.2 Monitor performance of healthcare provider(s)	<b>3.4 CIVIL REGISTRATION AND VITAL STATISTIC</b>	3.6.2 Track regulation and licensing of medical equipment
3.1.3 Manage certification/ registration of healthcare provider(s)	3.4.1 Notify birth event	<b>3.7 FACILITY MANAGEMENT</b>
3.1.4 Record training credentials of healthcare provider(s)	3.4.2 Register birth event	3.7.1 List health facilities and related information
<b>3.2 SUPPLY CHAIN MANAGEMENT</b>	3.4.3 Certify birth event	3.7.2 Assess health facilities
3.2.1 Manage inventory and distribution of health commodities	3.4.4 Notify death event	
3.2.2 Notify stock levels of health commodities	3.4.5 Register death event	
3.2.3 Monitor cold-chain sensitive commodities	3.4.6 Certify death event	
3.2.4 Register licensed drugs and health commodities	<b>3.5 HEALTH FINANCING</b>	
3.2.5 Manage procurement of commodities	3.5.1 Register and verify client insurance membership	
3.2.6 Report counterfeit or substandard drugs by clients	3.5.2 Track insurance billing and claims submission	
	3.5.3 Track and manage insurance reimbursement	
	3.5.4 Transmit routine payroll payment to healthcare provider(s)	
	3.5.5 Transmit or manage incentives to healthcare provider(s)	
	3.5.6 Manage budget and expenditures	

# 4.0 DATA SERVICES

4.1	DATA COLLECTION, MANAGEMENT, AND USE
4.1.1	Non routine data collection and management
4.1.2	Data storage and aggregation
4.1.3	Data synthesis and visualization
4.1.4	Automated analysis of data to generate new information or predictions on future events

4.2	DATA CODING
4.2.1	Parse unstructured data into structured data
4.2.2	Merge, de-duplicate, and curate coded datasets or terminologies
4.2.3	Classify disease codes

4.3	LOCATION MAPPING
4.3.1	Map location of health facilities/structures
4.3.2	Map location of health events
4.3.3	Map location of clients and households
4.3.4	Map location of healthcare provider(s)

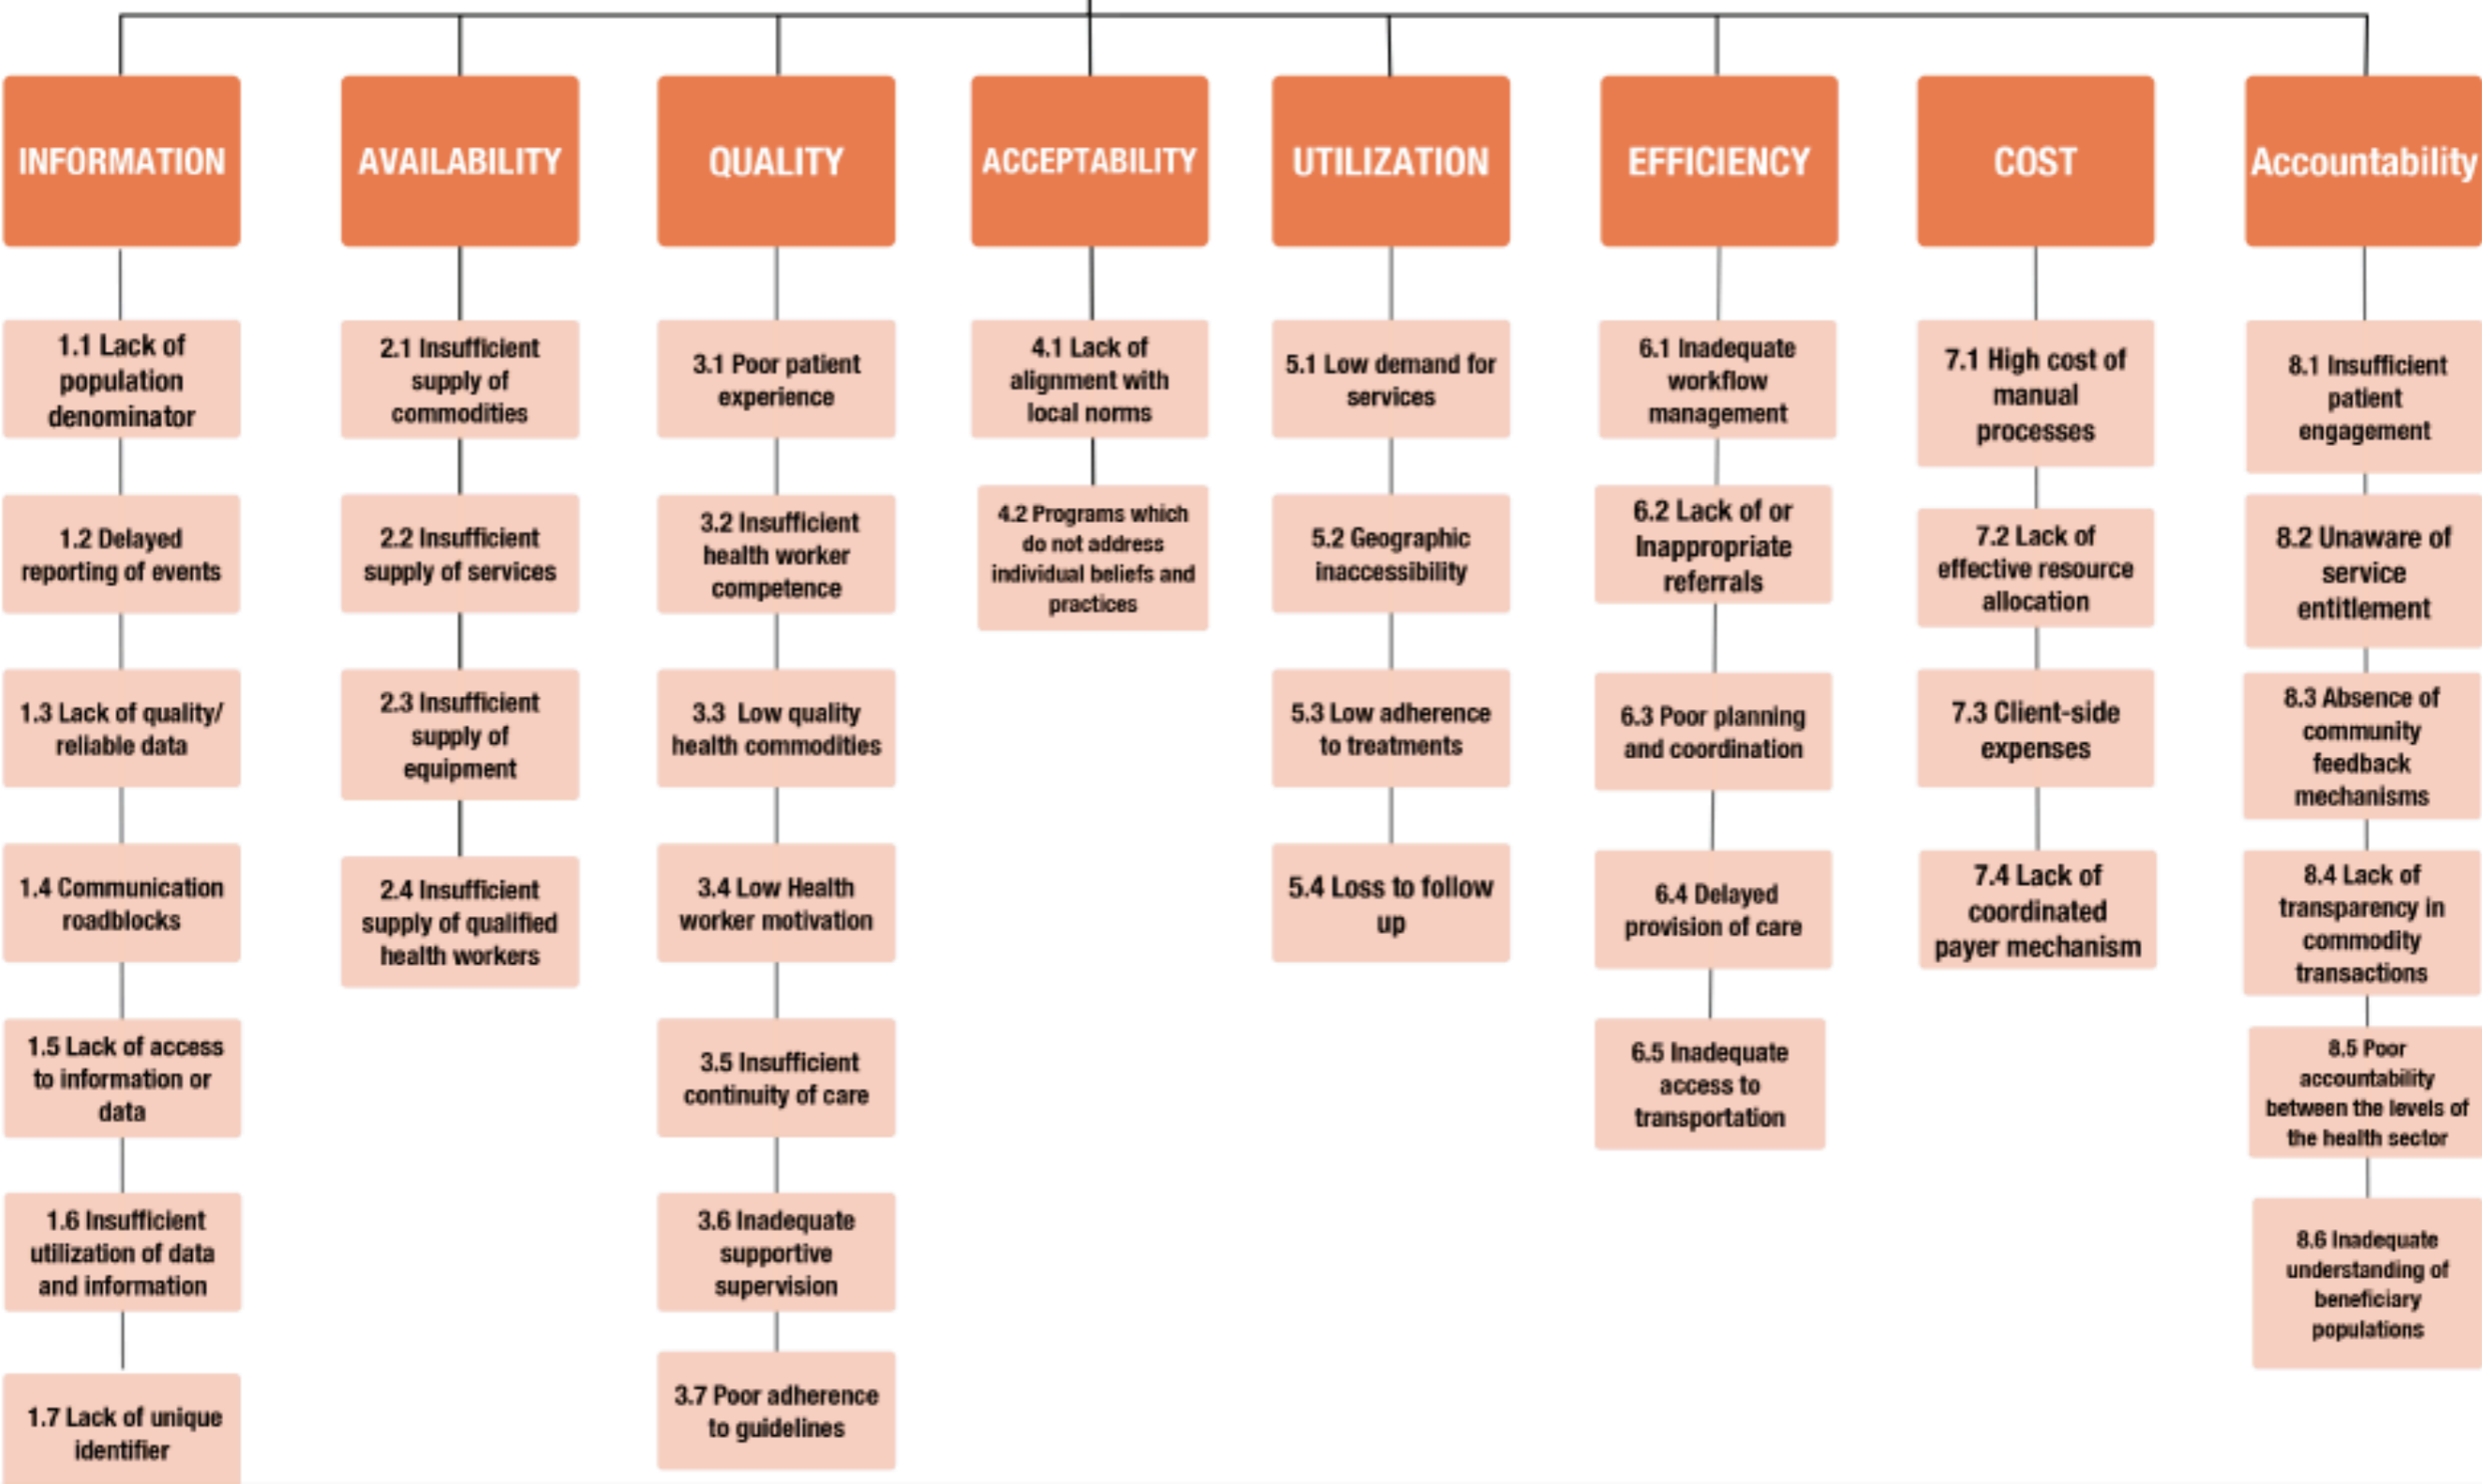

4.4	DATA EXCHANGE AND INTEROPERABILITY
4.4.1	Data exchange across systems

# 3.0 HEALTH SYSTEM MANAGERS

CATEGORY	INTERVENTIONS	SYNONYMS	ILLUSTRATIVE EXAMPLES*
<b>3.1 HUMAN RESOURCE MANAGEMENT</b> Digital approaches to manage the health workforce, including the use of databases to record training levels, certifications, and identification of health workers.	3.1.1 LIST HEALTH WORKFORCE CADRES AND RELATED IDENTIFICATION INFORMATION	- HEALTH WORKER REGISTRY; PROVIDER REGISTRY - DOCUMENTATION OF HEALTHCARE PROVIDERS' DEMOGRAPHICS, IDENTIFICATION, HEALTH FACILITY ASSIGNMENT, AND OTHER IDENTIFIER INFORMATION	iHRIS Manage: "... supports Ministry of Health and other service delivery organizations to track, manage, deploy, and map their health workforce." [24]
	3.1.2 MONITOR PERFORMANCE OF HEALTHCARE PROVIDER(S)	- REMOTE MONITORING OF HEALTHCARE PROVIDERS - WORKFORCE MANAGEMENT - AUDIT AND FEEDBACK - SUPERVISION, SUPPORTIVE SUPERVISION - CLINICAL TASK TRACKING	ICCM: The application includes a "routine supervision checklist on few key indicators of performance by the Health Surveillance Assistants (HSAs)...and a dashboard that enables users to see at a glance the status of the work being done by HSA." [8] Health Enablement and Learning Platform (HELP): "Community Health Extension Workers (CHEWs) receive weekly reports on worker performance and are able to target those in need of additional support." [8] mHealth for Community-Based Family Planning Services: "A system for the field team to monitor data and provide feedback to CHWs on a weekly basis..." [8]
	3.1.3 MANAGE REGISTRATION/ CERTIFICATION OF HEALTHCARE PROVIDER(S)	- MANAGEMENT OF HEALTH WORKER REGISTRATION - CERTIFICATION OR LICENSURE WITH REGULATORY AUTHORITY SUCH AS A PROFESSIONAL COUNCIL	iHRIS Qualify: "...enables a licensing or certification authority, such as a nursing council, to track complete data on a health worker cadre from pre-service training through attrition. It captures information about health professionals in that cadre from the time they enter pre-service training through registration, certification, and/or licensure." [24]
	3.1.4 RECORD TRAINING INFORMATION ON HEALTHCARE PROVIDER(S)	- TRACK OR MANAGE PRESERVICE AND/OR IN-SERVICE TRAINING RECEIVED BY A HEALTH WORKER	iHRIS Train: "Consolidates health worker training attendance and related data from several training organizations into a centralized database that can be queried and used to generate reports for further analysis." [24]
<b>3.2 SUPPLY CHAIN MANAGEMENT</b> Digital approaches for monitoring and reporting stock levels, consumption and distribution of medical commodities. This can include the use of communication systems (e.g. SMS) and data dashboards to manage and report on supply levels of medical commodities.	3.2.1 MANAGE INVENTORY AND DISTRIBUTION OF HEALTH COMMODITIES	- STOCK MONITORING OF HEALTH COMMODITIES - LOGISTICS MANAGEMENT - STOCK MANAGEMENT - COMMODITY SECURITY	International Quality Short Messaging System (IQSMS): "Healthcare workers' send preformatted commodity reports on key HIV stock status to a central server via SMS. The tool enables districts to full order of all commodities as quantified by the system and based on what has been consumed." [8] eLMIS Bangladesh: "...electronic Logistics Management Information System (eLMIS) collects data on consumption and availability of FP commodities, which is consolidated and entered for [viewing on] an interactive dashboard." [8] cStock: "HSAs sent a toll-free SMS using their personal mobile phones reporting current stock levels and medicines received..." [8]
	3.2.2 NOTIFY STOCK LEVELS OF HEALTH COMMODITIES	- STOCKOUT PREVENTION AND MONITORING - ALERTS AND NOTIFICATIONS OF STOCK LEVELS - RESTOCKING COORDINATION	ICCM: "Health workers can report stock levels and then submitted the data to cStock, a program to improve the tracking of inventories..." [8] cStock: "... automatically calculated resupply quantities and notified staff at health centers, who check their stock levels and advise HSAs whether stock was available for pick up or alerted health facilities and district managers that there was insufficient stock." [8] Informed Push Model: "Logistics professionals enter logistics data into CommTrack on tablets at the moment of delivery and
	<b>Intervention</b>	<b>Synonyms</b>	<b>Illustrative examples</b>
	3.2.2 Notify stock levels of health commodities	-Stockout prevention and monitoring -Alerts and notifications of stock levels	<ul style="list-style-type: none"> <li><b>cStock:</b> "... automatically calculates resupply quantities and notifies staff at health centers, who check their stock levels and advise HSAs on whether stock is available for pick up or alerts health facilities and district managers if there is insufficient stock." [8]</li> </ul>

# Challenges at Country-level

- Uncoordinated investment and development, and reinvention of tools;
- Poor understanding of existing goals, functionality, and maturity of existing digital systems;
- Inability to compare digital systems in standardized way
- Inadequate registry mechanisms that offer value to all stakeholders

## Sign up

Whether you are an implementer, government, or financial investor, sign up below.

### 1. SELECT YOUR ROLE

I'm an "Implementer"

How can I better scale-up my implementation? Are there tips and resources that I should consider to improve my implementation? Sign up to complete the digital version of the MAPS toolkit and track the performance of your implementation.

I'm a "Financial Investor"

What are the different projects within your portfolio? Sign up to access a visual dashboard displaying the performance metrics of projects within your portfolio.

### What Digital Health Atlas is?

Digital Health Atlas offers technologists, implementers, financial investors, and governments a platform of tools and guidance to improve the use of digital innovations for health. Leverages the WHO mHealth Assessment and Planning for Scale (MAPS) Toolkit.

Using metrics from the WHO mHealth Assessment and Planning for Scale (MAPS) Toolkit, the DHA allows implementers to assess the maturity of

# Digital Health Atlas

- Global web-platform to **curate digital health intervention** and shared asset info-structure investments, supporting **governments, donors, technologists and implementers** to map, monitor, and foster digital health investments planning to meet Government health goals

# Digital Health Atlas

- Supports **government led mechanisms to conduct dynamic inventories of digital health investments.**
- Allows for trusted partner to **uniquely identify and categorize** specific investments using minimum data set, and then hand over to project to add details.
- Additional **data fields and customization** will be added throughout 2017 with input from Governments, donors, and technologists.
- Mechanism for Government to verify information.

## Health System Challenge (HSC)

Need or problem to be addressed

Insufficient supply of commodities

Healthcare provider's poor adherence to clinical guidelines

Lack of access to information or data

Loss to follow-up of clients

## Digital Health Intervention (DHI)

Digital functionality for addressing the Health System Challenge

- 3.2.1 Manage inventory and distribution of health commodities
- 3.2.2 Notify stock levels of health commodities

- 2.3.1 Provide prompts and alerts based according to protocol
- 2.3.2 Provide checklist according to protocol
- 2.5.2 Communication and performance feedback to healthcare provider
- 2.7.2 Scheduling of health worker activities

- 2.2.4 Routine health indicator data collection and management
- 4.1.2 Data storage and aggregation
- 4.1.3 Data synthesis and visualizations

- 1.1.3 Transmit targeted alerts and reminders to a client
- 2.2.1 Longitudinal tracking of client's health status and services received

# CLASSIFICATION OF DIGITAL HEALTH INTERVENTIONS V1.0

A shared language to describe the uses of digital technology for health

## 1.0 CLIENTS

<b>1.1 TARGETED CLIENT COMMUNICATION</b>	<b>1.3 CLIENT TO CLIENT COMMUNICATION</b>	<b>1.6 ON-DEMAND INFORMATION SERVICES TO CLIENT</b>
1.1.1 Transmit health event alerts to specific population group(s)	1.3.1 Peer group for clients	1.6.1 Client look-up of health information
1.1.2 Transmit targeted health information to client based on health status or demographics	<b>1.4 PERSONAL HEALTH TRACKING</b>	<b>1.7 CLIENT FINANCIAL TRANSACTIONS</b>
1.1.3 Transmit targeted alerts and reminders to client(s)	1.4.1 Access by client to own medical records	1.7.1 Transmit or manage out-of-pocket payments by client
1.1.4 Transmit diagnostic result, or availability of result, to clients	1.4.2 Self-monitoring of health or diagnostic data by client	1.7.2 Transmit or manage vouchers to client for health services
<b>1.2 UNTARGETED CLIENT COMMUNICATION</b>	<b>1.5 CITIZEN BASED REPORTING</b>	1.7.3 Transmit or manage incentives to clients for health services
1.2.1 Transmit untargeted health information to an undefined population	1.5.1 Reporting of health system feedback by clients	
1.2.2 Transmit untargeted health event alerts to undefined group	1.5.2 Reporting of public health events by client	

## 2.0 HEALTHCARE PROVIDERS

<b>2.1 CLIENT IDENTIFICATION AND REGISTRATION</b>	<b>2.5 HEALTHCARE PROVIDER COMMUNICATION</b>	<b>2.8 HEALTHCARE PROVIDER TRAINING</b>
2.1.1 Verify client unique identity	2.5.1 Communication from healthcare provider to supervisor	2.8.1 Provide training content to healthcare provider(s)
2.1.2 Enrol client for health services/clinical care plan	2.5.2 Communication and performance feedback to healthcare provider	2.8.2 Assess capacity of healthcare provider
<b>2.2 CLIENT HEALTH RECORDS</b>	2.5.3 Transmit routine news and workflow notifications to healthcare provider(s)	<b>2.9 PRESCRIPTION AND MEDICATION MANAGEMENT</b>
2.2.1 Longitudinal tracking of client's health status and services received	2.5.4 Transmit non-routine health event alerts to healthcare providers	2.9.1 Transmit or track prescription orders
2.2.2 Manage client's structured clinical records	2.5.5 Peer group for healthcare providers	2.9.2 Track client's medication consumption
2.2.3 Manage client's unstructured clinical records	<b>2.6 REFERRAL COORDINATION</b>	2.9.3 Report adverse drug effects
2.2.4 Routine health indicator data collection and management	2.6.1 Coordinate emergency response and transport	<b>2.10 LABORATORY AND DIAGNOSTICS IMAGING MANAGEMENT</b>
<b>2.3 HEALTHCARE PROVIDER DECISION SUPPORT</b>	2.6.2 Manage referrals between points of service within health sector	2.10.1 Transmit diagnostic result to healthcare provider
2.3.1 Provide prompts and alerts based according to protocol	2.6.3 Manage referrals between health and other sectors	2.10.2 Transmit and track diagnostic orders
2.3.2 Provide checklist according to protocol	<b>2.7 HEALTH WORKER ACTIVITY PLANNING AND SCHEDULING</b>	2.10.3 Capture diagnostic results from digital devices
2.3.3 Screen clients by risk or other health status	2.7.1 Schedule clients appointments based on clinical care plan	2.10.4 Track biological specimens
<b>2.4 TELEMEDICINE</b>	2.7.2 Schedule healthcare provider's activities	
2.4.1 Consultations between remote client and healthcare provider		
2.4.2 Remote monitoring of client health or diagnostic data by provider		
2.4.3 Transmission of medical data to healthcare provider		
2.4.4 Consultations for case management between healthcare providers		

## 3.0 SYSTEM MANAGERS

<b>3.1 HUMAN RESOURCE MANAGEMENT</b>	<b>3.3 PUBLIC HEALTH EVENT NOTIFICATION</b>	<b>3.6 EQUIPMENT AND ASSET MANAGEMENT</b>
3.1.1 List health workforce cadres and related identification information	3.3.1 Notification of public health events from point of diagnosis	3.6.1 Monitor status of health equipment
3.1.2 Monitor performance of healthcare provider(s)	<b>3.4 CIVIL REGISTRATION AND VITAL STATISTIC</b>	3.6.2 Track regulation and licensing of medical equipment
3.1.3 Manage certification/registration of healthcare provider(s)	3.4.1 Notify birth event	<b>3.7 FACILITY MANAGEMENT</b>
3.1.4 Record training credentials of healthcare provider(s)	3.4.2 Register birth event	3.7.1 List health facilities and related information
<b>3.2 SUPPLY CHAIN MANAGEMENT</b>	3.4.3 Certify birth event	3.7.2 Assess health facilities
3.2.1 Manage inventory and distribution of health commodities	3.4.4 Notify death event	
3.2.2 Notify stock levels of health commodities	3.4.5 Register death event	
3.2.3 Monitor cold-chain sensitive commodities	3.4.6 Certify death event	
3.2.4 Register licensed drugs and health commodities	<b>3.5 HEALTH FINANCING</b>	
3.2.5 Manage procurement of commodities	3.5.1 Register and verify client insurance membership	
3.2.6 Report counterfeit or substandard drugs by clients	3.5.2 Track insurance billing and claims submission	
	3.5.3 Track and manage insurance reimbursement	
	3.5.4 Transmit routine payroll payment to healthcare provider(s)	
	3.5.5 Transmit or manage incentives to healthcare provider(s)	
	3.5.6 Manage budget and expenditures	

## 4.0 DATA SERVICES

<b>4.1 DATA COLLECTION, MANAGEMENT, AND USE</b>	<b>4.2 DATA CODING</b>	<b>4.3 LOCATION MAPPING</b>
4.1.1 Non-routine data collection and management	4.2.1 Parse unstructured data into structured data	4.3.1 Map location of health facilities/structures
4.1.2 Data storage and aggregation	4.2.2 Merge, de-duplicate, and curate coded datasets or terminologies	4.3.2 Map location of health events
4.1.3 Data synthesis and visualization	4.2.3 Classify disease codes	4.3.3 Map location of clients and households
4.1.4 Automated analysis of data to generate new information or predictions on future events		4.3.4 Map location of healthcare provider(s)
		<b>4.4 DATA EXCHANGE AND INTEROPERABILITY</b>
		4.4.1 Data exchange across systems
