

BID LEARNING NETWORK

The **BID Learning Network (BLN)** builds a bridge between countries, and regional and global partners, through mentorship, peer learning opportunities, and knowledge management. It provides targeted expertise to help governments strengthen their routine data systems.

The BLN operates under the following key principles.

- ✓ **HONEST BROKER**
Offers impartial, technology-agnostic guidance on the most appropriate types of digital and data solutions for each country's context.
- ✓ **A SPECTRUM OF SUPPORT**
Meets countries wherever they are in their journey to digital transformation, engaging around a range of short- and long-term services.
- ✓ **COUNTRY OWNED & COUNTRY LED**
Allows participants to set their own agenda and identify discussion topics, and provides feedback loops for countries to both benefit from and contribute to the existing knowledge base.
- ✓ **BROAD HEALTH AREAS**
Provides holistic services on the design, implementation, and scale-up of digital and data solutions to address routine data challenges at a primary health care level.

COUNTRY IMPACT

The BLN leverages our deep expertise and that of our partners to serve as a hub for dynamic technical support, so countries can:

- ✓ Improve capacity to make informed decisions on digital and data solutions for their country context.
- ✓ Access a knowledge base on digital and data solutions.
- ✓ Become informed about specific areas of digital and data solutions.
- ✓ Use the evidence base and lessons from prior experiences to capitalize on the successful implementation of digital solutions from peer countries.
